Abstract of GB2262024

A shoe (1) has a pump (5) in its heel with an inlet tube (6) including a one-way valve (7) and an outlet tube (8) also including a one-way valve (9), the outlet tube being connected to an air distribution pad (10) in the sole of the shoe. Pressure of the pump when the heel contacts the ground the pump and forces it into and through the pad to provide air circulation within the shoe. The pump may be deactivated by means of a valve or switch 11.
